Features:

- High quality ARP Solina samples, only the halftones are pitchshifted (samples provided by courtesy of Lawrence Eldridge)
- A fat filter section
- A filter modulation section and an effect section to enhance the sound variety
- A user friendly interface with knobs and sliders you can see without your glasses on
- All notes can be played velocity sensitive
- All knobs / sliders on the interface are remotely controllable by MIDI
- It sounds awesome and it's free!!

Overview:

Wombat Solina Violin only: All notes are shifted down one octave. In other words, if you hit the C1 key on your keyboard you actually play a C2 sample. This enables users of 'standard' 5-octave keyboards to play the full range of samples.

This instrument is quite a heavyload process, I noticed frequent peaks on my system performance indicator. Unfortunately this is - as far as I understand it - beyond my control as I used Synthedit to generate this instrument. So, check out if your CPU is fast enough to run this instrument in a reliable manner.

For information about a function of a knob / slider move your mouse pointer over it and **read the pop-up context**.

Midi Implementation:

	Item	Controller No.		Item	Controller No.
Global	Retrigger	84	Filter Modulation	Waveform	102
	Pitch	85		Sync	103
	Volume	86		Amount	104
	Velocity on/off	106		Speed	105
Filter	Cutoff	87	Effect	Type	25
	Resonance	20		Amount	80
				Feedback	81
Envelope	Attack	21		Flanger Rate	82
	Decay	22		Delay Time	83
	Sustain	23			
	Release	24			

Installation:

Copy the file Wombat Solina x.dll into your VST Plug-in folder.

Version History:

Version 1.0 :   first release, compiled with Synthedit v. 0.9475 Unicode

Version 2.0:   second release, compiled with Synthedit v. 0.9518 Unicode:
                changes:
                - complete reprogramming of the instrument and therefore a.....
                - slightly improved performance of the instrument
                - all samples are looped now
                - velocity switch (on/off) implemented
                - release time parameter optimized
                - volume-clipping LEDs implemented
                - no more downshifting (in v. 1.0 all notes were shifted down one octave)
                - reduced the size of the .dll file
                - rearrangement of the GUI
                - removed the top C note
